TABLE OF CONTENTS

Session 1: Mathematical Foundations of Computer Arithmetic
Dr. U. Kulisch, Chairman

Mathematical Foundations of Computer Arithmetic
By U. Kulisch 1

Floating-Point Computation of Functions with Maximum Accuracy
By G. Bohlender 14

Consequences of a Properly Implemented Computer Arithmetic for Periodicities of Iterative Methods
By R. Klatte and Ch. Ullrich 24

Understandable Arithmetic
By P. H. Sterbenz 33

Comparison Sets: A Useful Partitioning of the Space of Floating Point Operand Pairs
By J. G. Kent 36

Session 2: Control and Monitoring of Precision
Dr. N. Metropolis, Chairman

A Unified Numeric Data Type in Pascal
By P. Kornerup 40

The Design of a Polymorphic Arithmetic Unit
By A. L. Lang and B. D. Shriver 48

The Design and Use of a Floating-Point (Software) Simulator for Testing the Arithmetic Behavior of Mathematical Software
By M. Ginsberg and D. J. Frailey 56

Significance Arithmetic: Application to a Partial Differential Equation
By R. L. Bivins and N. Metropolis 64

ROM Rounding: A New Rounding Scheme
By D. J. Kuck, D. S. Parker and A. H. Sameh 67

Programmer-Controlled Roundoff and the Selection of a Stable Roundoff Rule
By R. A. Keir 73

Session 3: Number Systems
W. Cody, Chairman

Formal Systems of Numerals
By A. Gabrielian 76

Compatible Number Representations
By R. A. Keir 82

Redundancy in Number Representations as an Aspect of Computational Complexity of Arithmetic Functions
By A. Avizienis 87

Fixed-Slash and Floating-Slash Rational Arithmetic
By D. W. Matula 90

Matrix Processors Using p-ADIC Arithmetic for Exact Linear Computations
By E. V. Krishnamurthy 92

Mirror Arithmetic
By J. P. Chinal 98

Session 4: Residue Arithmetic and Error Control
H. Garner, Chairman

Self Checking Adder for Large Scale Integration
By A. Svoboda 108

On Combinational Logic for Sign Detection in Residue Number Systems
By D. K. Banerji 113

Base Conversion in Residue Number Systems
By R. T. Gregory and D. W. Matula 117

The Logic of Modulo $2^K + 1$ Adders
By J. P. Chinal 126

TABLE OF CONTENTS (Continued)

Session 5: Arithmetic Algorithms and Their Analysis
J. Robertson, Chairman

On the Use of Continued Fractions for Digital Computer Arithmetic
By K. S. Trivedi 137

A General Method for Evaluation of Functions in a Digital Computer
By M. D. Ercegovac 147

Higher Radix, Non-Restoring Division: History and Recent Developments
By D. E. Atkins 158

On-Line Algorithms for Division and Multiplication
By K. S. Trivedi and M. D. Ercegovac 161

Session 6: Case Studies of Arithmetic Processor Design and Implementation
A. Avizienis, Chairman

Case Study of the Pipelined Arithmetic Unit for the TI Advanced Scientific Computer
By C. Stephenson 168

A Minicomputer Microprogrammable, Arithmetic Processor
By T. H. Kehl and K. Burkhardt 174

The UNRAU - A Unified Numeric Representation Arithmetic Unit
By B. Shriver and P. Kornerup 179

Session 7: Ultra-High Speed Arithmetic for Special Purpose Processors
T. C. Chen, Chairman

CHARGOGGAGGOGGMANCHAUGAGOGGCHAUBUNAGUNGAMAUG

A Novel Multiply-By-Three Circuit
By C. Foster, E. Riseman, F. Stockton and C. Wogrin 185

Developing Large Binary to BCD Conversion Structures
By M. Benedek 188

On Residue Number A/D and D/A Converters
By G. J. Lipovski 197

High-Speed Zero-Sum Detection
By A. Weinberger 200

Session 8: Parallelism and Array Logic
S. Winograd, Chairman

Optimum Array-Like Structures for High-Speed Arithmetic
By D. P. Agrawal 208

The Impact of Parallelism on Software
By G. W. Cobb 220

Design of an Arithmetic Element for Serial Processing in an Iterative Structure
By L. N. Goyal 223

Minimization Methods for Macrocellular Arithmetic Networks
By R. De Mori, M. Elia, and A. Serra 232

A Bibliography on Computer Arithmetic
By B. D. Shriver and E. K. Reuter 241
